Will 2026 be the bloodbath some dealers claim?

After a brief hiatus, we're back with another Industry Insights report—and this one comes armed with more data (and a few more uncomfortable truths) than ever before.

2025 was a curious year for the Philippine automotive industry. On paper, total sales looked relatively flat. But dig a little deeper and a far more interesting story emerges: the market didn't stand still, it rearranged itself. Consumer interest shifted meaningfully, and purchasing behavior followed suit.

No discussion of 2025 would be complete without mentioning BYD. The AC Mobility-backed brand surged to third place in overall industry sales, a position mirrored almost exactly in AutoDeal data, where BYD also ranked as the third most inquired-for brand. We haven't seen this kind of acceleration from a once "outsider" brand in a very long time. BYD didn't just enter the conversation, it rewrote it.

More importantly, BYD has become the standard-bearer for EV adoption in the Philippines. Its momentum has normalized electric vehicles for a broad segment of buyers, effectively lowering the barrier for other EV brands preparing to enter the market. That's the upside.

The potential downside is scale.

2025 was another year defined by transition. New brands continued to enter the market, long-standing structures shifted and several brands once thought dormant were quietly revived. At the same time, major international players such as Astara exited the Philippine market altogether.

Looking ahead to 2026, the pipeline of incoming brands shows no sign of slowing. This raises a persistent and increasingly urgent question: with limited overall industry growth and sustained headwinds, just how much competitive pressure can the Philippine automotive market realistically absorb?

The challenges are far from theoretical. July's excise tax increase on pickup trucks had an immediate and measurable effect. AutoDeal data shows consumer interest in key pickup models dropping by as much as 40 percent. Add to that a weakening peso-dollar exchange rate and increasingly tight automotive loan approvals, and it's little surprise that many dealers are looking toward 2026 with visible unease. One dealer put it bluntly to me: next year, he said, will be a "bloodbath."

What's striking is just how quickly the industry's assumptions have been overturned. A decade ago, I sat in rooms with Japanese-brand dealer executives who confidently insisted that Chinese automotive brands would never gain traction here. Fast forward to today, and BYD sits at number three, MG at number eleven, with multiple Chinese brands clustered throughout positions twelve to twenty.

The pace of change has accelerated beyond what the industry's traditional structures were built to accommodate. The defining question now is not whether disruption will continue, but whether the Philippine automotive ecosystem can absorb it without forcing consolidation, exits, or other resets.

Christopher L. Franks
